Supporting Documentation:

67028 - intravitreal injection of a pharmacologic agent into the vitreous of the eye. It is used for procedures on the posterior segment of the eye, such as injecting a medication into the vitreous chamber. Proper billing for this code requires including site modifiers like "-RT" or "-LT" for unilateral (one eye) or "-50" for bilateral (both eyes) services, along with the correct HCPCS code for the medication and a relevant ICD-10 diagnosis code.

Considerations/Limitations: Included providers that had date of service from 2024 to present, and specific to Medicare members only. **Anticipated and estimated overpayments would be significantly increased if other lines of business were included in the analysis.**

Investigation tips:

Providers billing E/M with intravitreal injections to ensure documentation supports an E/M service that was significant and separately identifiable from the procedure was also rendered.

Estimated Financial Impact:

Claim paid amount:	\$8,218,381
Anticipated overpayment:	\$1,203,820
Estimated overpayment - 5 years:	\$3,513,972
